PROJECTS

NewsViews.com ⧉
React JS | API
01/2023

- Used React JS to develop a website which calls an API to fetch current news of different categories around the world along with significant data.
- Implemented a feature displaying real-time temperature data of a location within the app.
- Articles are displayed in form of reusable nested components which enhances the website performance.

Apocalypse Survivor Game ⧉
Vanilla Javascript
12/2022

- Created an addictive high speed web-based 2D game using vanilla javascript where character has to escape the obstacles to survive.
- The game has dynamic features like gravity motion, collision, live scorecard, etc.

Personal Portfolio Website ⧉
HTML | CSS | Javascript
10/2022

- Built a interactive website to illustrate projects & skills with the help of basic web development languages.
- The Website is completely responsive for different screen sizes and multi-media devices.
